

Swiss National Foundation for Organ
Donation and Transplantation

Organ donation and transplantation

Bern | 2025

info@swisstransplant.org

**Aline,
heart recipient**

Objectives of the presentation

1. The Swisstransplant Foundation
2. Transplantation Act
3. Facts and figures
4. Organ donation procedure
5. Questions

01

Swisstransplant
Structure and organization

Swisstransplant

Swisstransplant – Swiss National Foundation for Organ Donation and Transplantation

1985

Creation of the Foundation in Geneva
• Bern

2007

Mandated by the Federal Office of Public Health (FOPH) as the national allocation service

- Allocation of organs to recipients in accordance with the law
- Management of the waiting list

2009

Allocation of benefits by the Swiss Conference of the Cantonal Ministers of Public Health

- Coordination and development of organ donation at the national level

Compensation in the organ donation process/financing of hospital staff (H+/SVK)

Partners

Collaboration

5

Organization

5 donation networks

Swisstransplant mandated by the CDS for:

- Regional grouping of hospitals
- Training of medical staff
- Implementation of legal directives
- Implementation of standard processes
- **Use of synergies at national level**

PLDO – 17 Spitäler

Programme Latin de Don d'Organes

Netzwerkleiter

PD Dr. med. Raphaël Giraud

Kantone: FR, GE, JU, NE, TI, VD, VS

Entnahmespitäler

- Centre Hospitalier du Valais Romand (CHVR) (Spital Sitten)
- Centre hospitalier universitaire vaudois (CHUV)
- Ente Ospedaliero Cantonale (EOC) (Standort Lugano)
- HFR Freiburg – Kantonsspital
- Hôpitaux universitaires de Genève (HUG)
- Réseau hospitalier neuchâtelois (RHNe) (Standort Pourtalès)

DCA – 23 Spitäler

Donor Care Association

Netzwerkleiter

PD Dr. med. Matthias Hilty

Kantone: GL, GR, SH, SZ, TG, ZG, ZH

Entnahmespitäler

- Kantonsspital Graubünden (KSGR) (inklusive Kinder- und Jugendmedizin)
- Kantonsspital Winterthur (KSW)
- Universitätsspital Zürich (USZ)

NOO – 5 Spitäler

Netzwerk Organspende Ostschweiz

Netzwerkleiterin

Yvonne Hilpertshauser

Kantone: AI, AR, SG

Entnahmespital

- Kantonsspital St. Gallen (KSSG)

CHM – 20 Spitäler

Organspende Netzwerk Schweiz-Mitte

Netzwerkleiterin

Dr. med. Sabine Camenisch

Kantone: AG, BE, BL, BS, SO, VS

Entnahmespitäler

- Kantonsspital Aarau (KSA)
- Universitäts-Kinderspital beider Basel (UKBB)
- Universitätsspital Basel (USB)
- Universitätsspital Bern (Inselspital) (inklusive Kinderkliniken)

Luzern – 8 Spitäler

Netzwerkleiter

Dr. med. Christian Brunner

Kantone: LU, NW, OW, UR

Entnahmespital

- Luzerner Kantonsspital (LUKS) (inklusive Kinderspital Luzern)

Transplant centres in Switzerland

University Hospital of Bern (Inselspital)

University Hospital of Basel (USB)

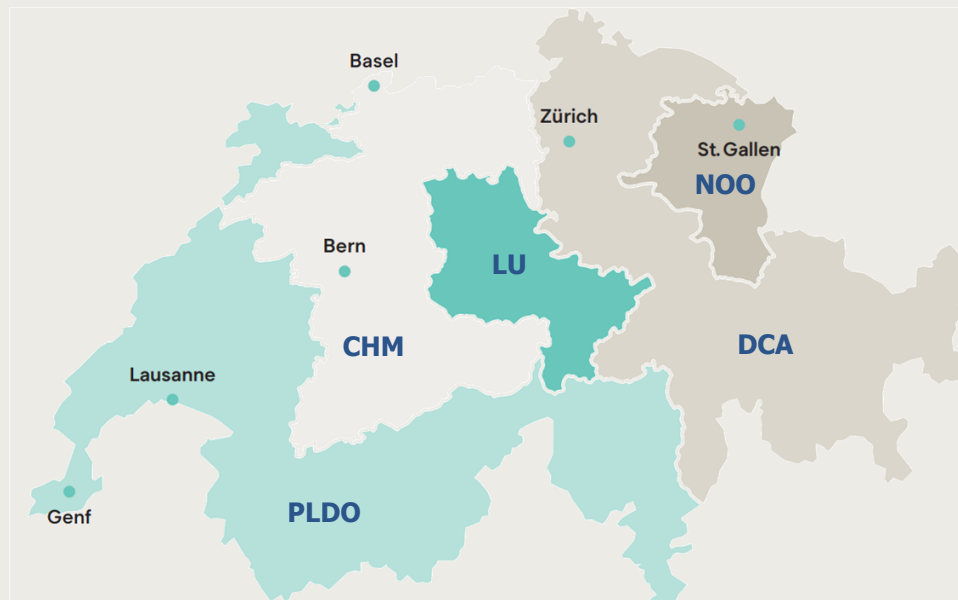

University Hospital of Zurich (USZ)

University Hospital of Vaud (CHUV)

University Hospital of Geneva (HUG)

Cantonal Hospital of St. Gallen (KSSG)

02

Swisstransplant
Politics and society

Transplantation Act

Transplantation Act

Federal Act on the Transplantation of Organs, Tissues and Cells (Transplantation Act), 2007

- Replaced cantonal legislation regulating donor and recipient aspects
- Creation of a national allocation service

Essential points of the law

- Principle of free access and prohibition of trade
- Principle of explicit consent in the broader sense*
- Organ allocation according to by-laws

* In May 2022, the Swiss electorate approved the introduction of the extended opt-out system. The Organ and Tissue Donation Register is set to be introduced at some point in 2026, and the opt-out system will be rolled out six months later ([bag.admin.ch](https://www.bag.admin.ch)).

What is the extended opt-out solution?

- If a person objects to organ donation while they are alive, they are no longer an organ donor.
- If the deceased person made no statement regarding organ donation prior to their death, the next of kin are consulted. “Do you know if the deceased stated or would state that they *do not* want to be an organ donor?”
- If there is no objection or any other statement regarding the willingness of the deceased to be a donor, and if no next of kin can be found despite efforts being made, no organs may be removed.

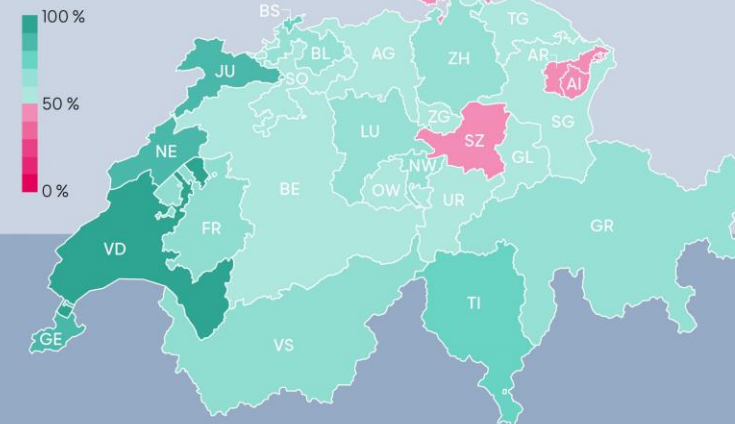

Change of system: Extended opt-out solution

60.2 % yes

Voters say YES to the new Federal Act on the Transplantation of Organs, Tissues and Cells

Referendum of 15 May 2022

Yes: 60.2 %

No: 39.8 %

Votes: 1 319 262

872 121

The extended opt-out system is expected to apply from the second half of 2026.

In principle, every person is considered to be a donor of organs and tissues, unless he or she has stated during his or her lifetime that he or she does not wish to donate. Relatives are included.

03/2025

Effective numbers of deceased donors

Figure 1: Number of deceased donors in Switzerland. DBD: Donation after brain death following cardiac and circulatory arrest. A donor is any deceased person who has undergone a surgical intervention with the intention of organ procurement for the purpose of transplantation.

Rate of consent 2024: 38%

Organ donation potential Switzerland

Effective donors 2024

Potential donors from 2026

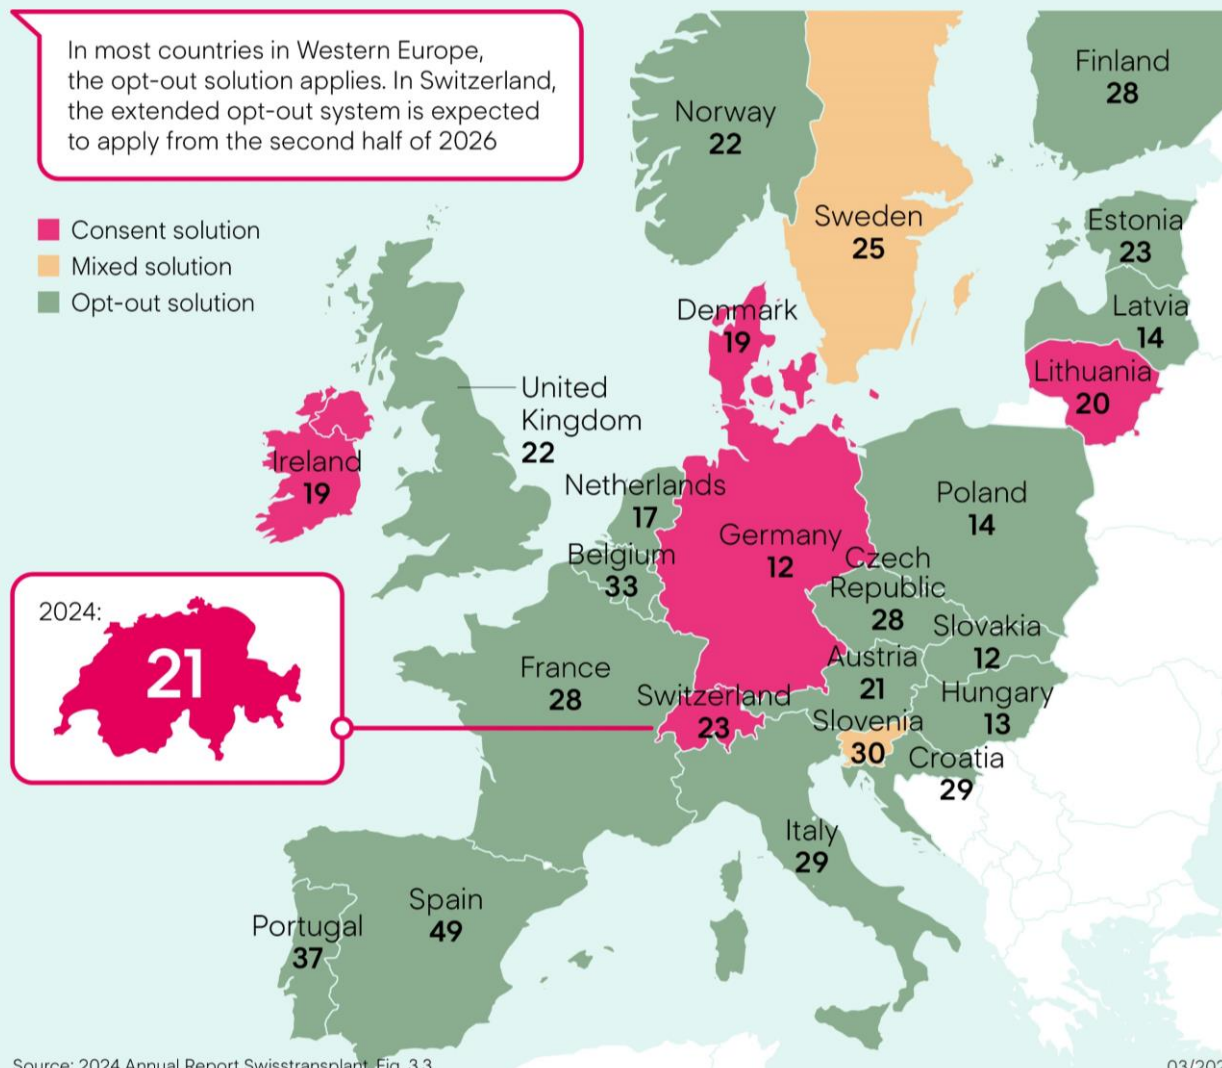

03

Swisstransplant
Organ donation in Switzerland

Facts and figures

Donation rate in Europe

Number of deceased donors per million inhabitants in 2023

Source: 2024 Annual Report Swisstransplant, Fig. 3.3

03/2025

28.05.2025

Swisstransplant annual figures – deceased donors

Post-mortem donation

DBD: donation after brain death

- Brain-dead donor
 - Circulation mechanically stabilized
 - Donation of all organs possible

DCD: donation after cardiocirculatory death

- Non-heart-beating donor
 - Change of therapy – not brain-dead
 - Donation of all organs possible

Transplantation through living donation

Living organ donation in Switzerland

- A kidney or part of the liver
- Directed donation
- Altruistic donation
- Kidney paired donation

Waiting list and transplantations (1 Jan.–31 Dec. 2024)

Typical example

**60
years
old**

Causes and frequency of death in organ donors – Distribution in %

■ Anoxia

■ Stroke

■ Traumatic brain injuries

■ Other

n total = 187 donors

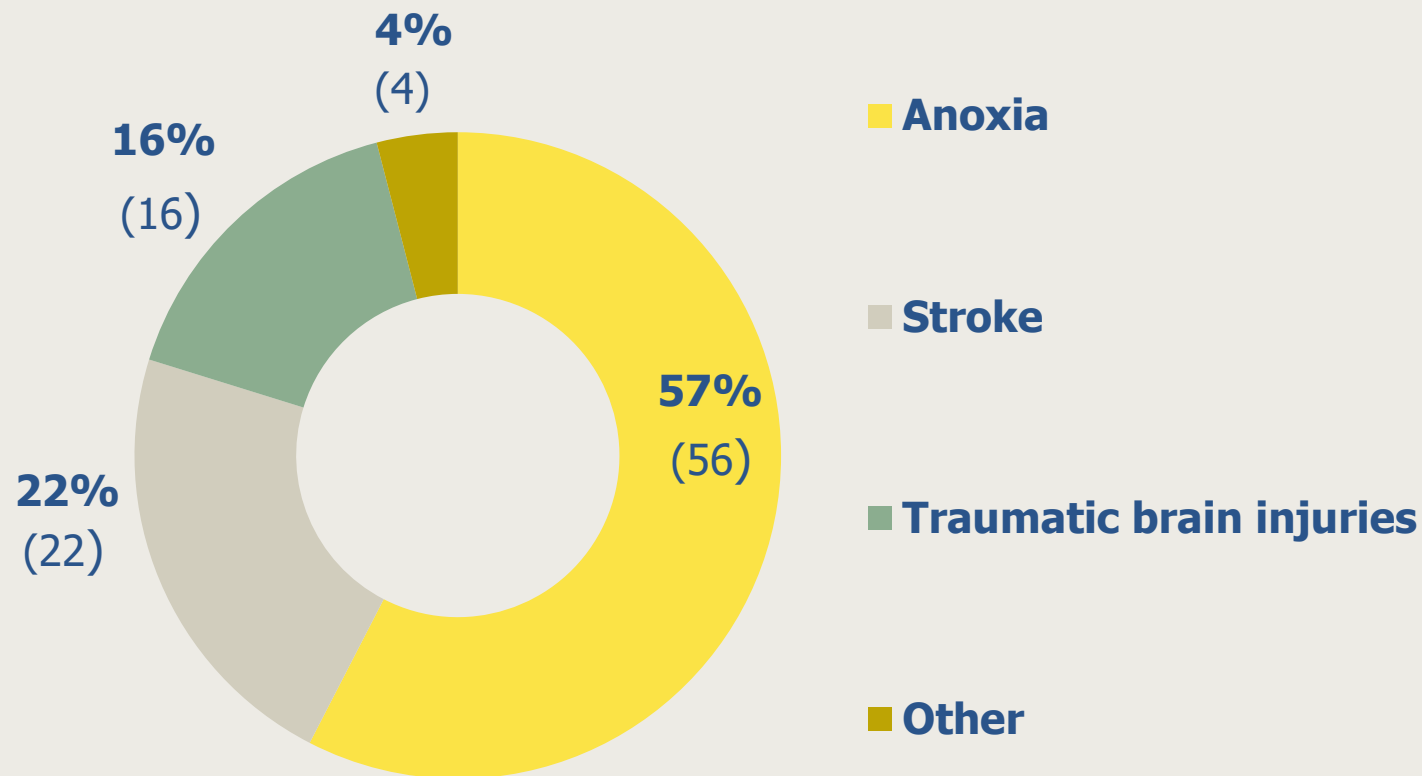

Causes and frequency of death in organ donors – Distribution in %

DBD

n total = 89 donors
rounded values

DCD

n total = 98 donors

Absolute medical contraindications

**Untreatable
sepsis**

**Degenerative
disorder CNS***

Rabies virus, prion disease
(e.g. Creutzfeldt-Jakob
disease CJD)

*CNS = central nervous system

Brain death

Irreversible failure of the brain and brain stem

- The organs receive the oxygen they need to continue functioning through mechanical ventilation.

Brain death: not to be confused with coma

- Coma: potentially **reversible** partial lesions of the brain. Patients react to certain stimuli; measurable brain activity.

Brain death – diagnosis through imagery

Normal circulation

MRI/angiogram of a brain with normal circulation

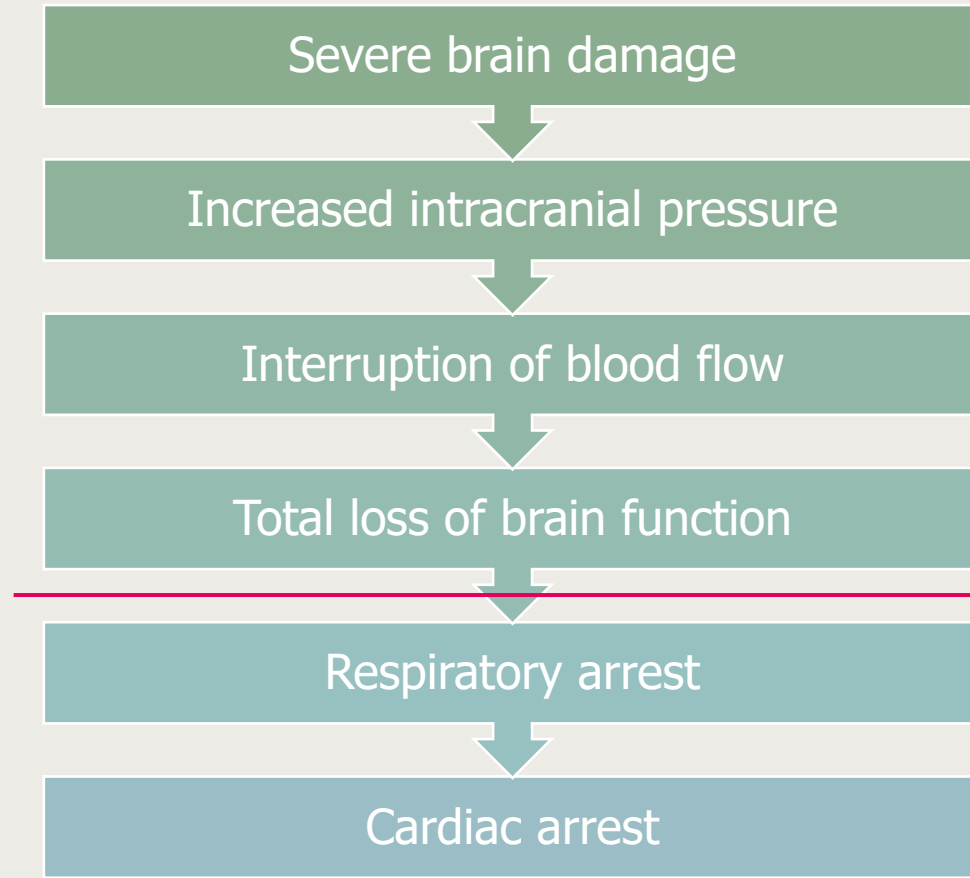

Interrupted circulation

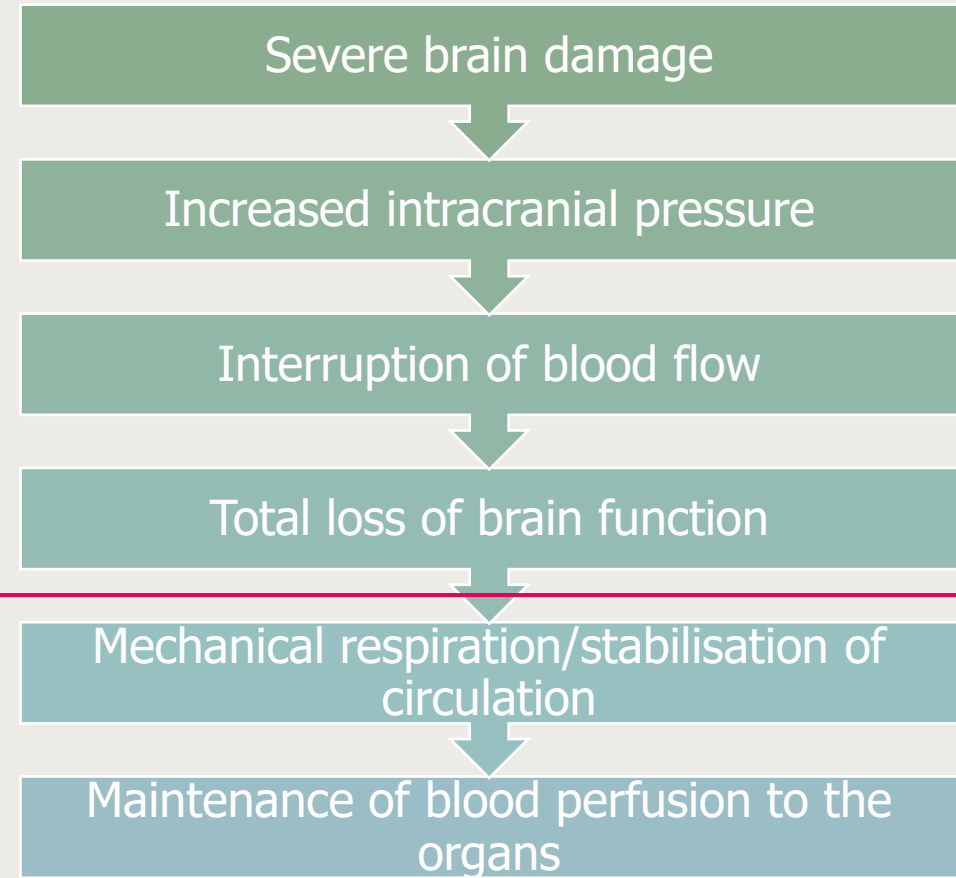

CT scan/angiogram of brain with interrupted circulation

Brain death – natural process vs. process in intensive care unit

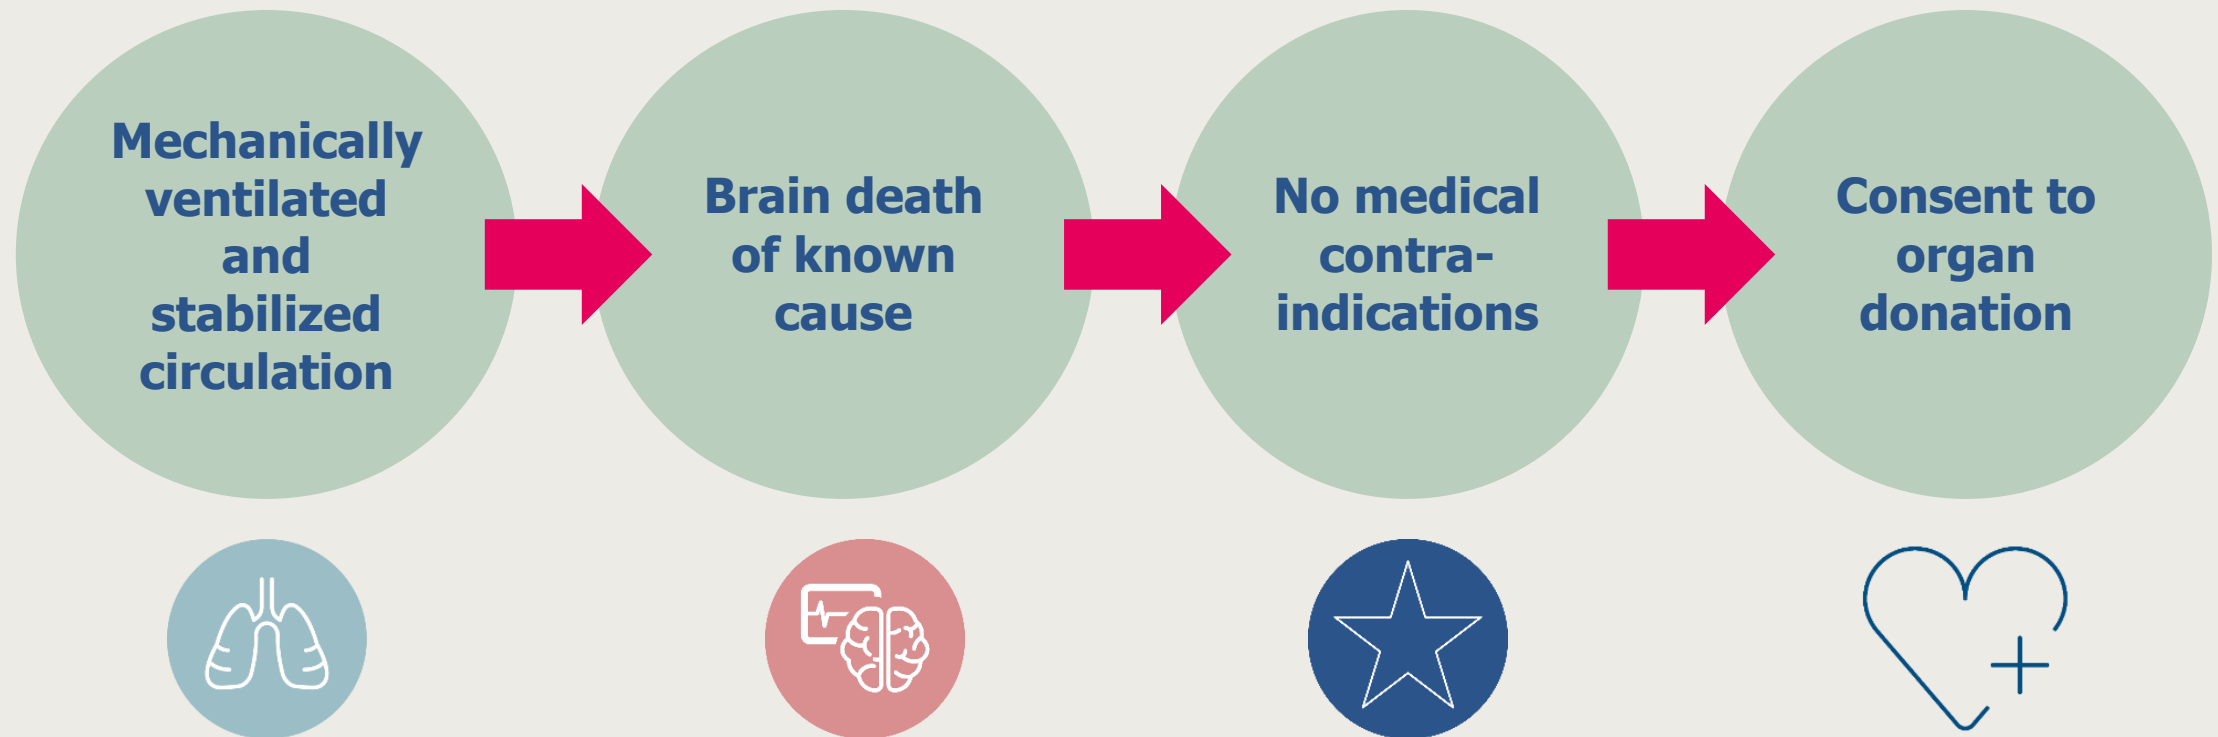

Natural process:

Process in intensive care unit:

Who can be a donor?

04

Swisstransplant
Procedure

Process of organ donation

Procedure

1. Hospitalization

2. Intensive care

- Mechanically ventilated
- Medication maintains circulatory function
- If the brain and brain stem functions are irreversibly affected, there is no possible further treatment

Saving the patient is always the priority. Organ donation is only discussed when this is not possible.

Procedure

3. Diagnosis of brain death

- Carried out by two impartial specialists who are not involved in the transplant procedure
- 7 clinical signs: brainstem reflex test

Examples of normal and pathological reactions

Corneal reflex

Vestibulo-ocular reflex

Mydriatic test

Procedure

4. Consent

- First approach: informed of brain death/life-threatening condition
- Second approach: question of wishes of the deceased regarding organ donation

No urgency for the decision

Procedure

5. Discussion with relatives

- Away from the patient's bed
- Announcement of death or hopeless diagnosis and change of treatment
- Organ and tissue donation discussed

6. Time frame

- Maximum of 48 hours between the change of treatment and brain death (otherwise DCD donation)
- Organ procurement must be completed within 72 hours of the diagnosis of brain death

Procedure

7. Swisstransplant

- Permission given
- Brain death/change of treatment
- Data entry of the deceased:
 - Case history
 - Results
 - Laboratory tests
 - Imagery

Procedure

8. Waiting list/ranking

- Data entry in the SOAS (Swiss Organ Allocation System)
- Swisstransplant – calculation of the ranking of the potential recipients using SOAS software
- The ranking list depends on donor characteristics

Allocation						
ID, Name	ST-2023-0192 Testlastname T.					Date of birth
Proc. hosp.	BE-INSEL					Weight
HLA	A[2,24(9)] B[7,35] DR[13(6),17(3)] DQ[6(1),7(3)] DP[2,4] CW[10(3),7] DRB3/4/5[DRB3*01,DRB3*02]					ABO
Heart	Lung	Liver	Kidney	Pancreas	Small bowel	
Step 1	04.12.2023 14:14:57			Time base	Non urgent	04.12.2023
Ext. criteria : No	Donor Type : DBD			Incision made		Clamped

fictitious example SOAS

Procedure

9. Attribution

- The ranking list is calculated on the basis of the distribution rules of the law using an algorithm
- Swisstransplant offers organs to centres for potential recipients

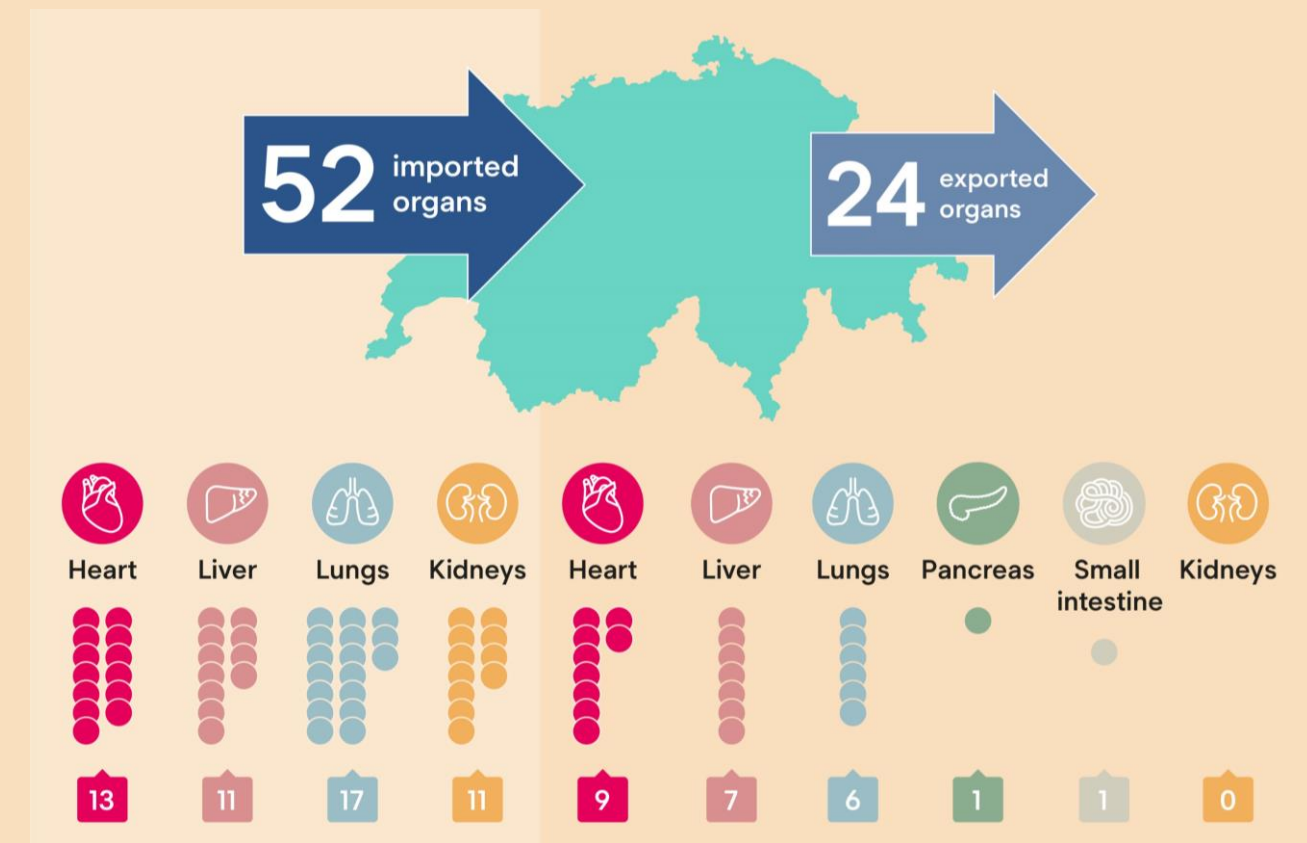

1	2	3	4
Medical urgency	Medical benefit	Priority (children/blood Group)	Waiting time

Procedure

9. Attribution

- Cooperation with European allocation centres

Annual report Swisstransplant 2024

Procedure

10. Planning

- Timing: everything at the right time and place
- Limiting factors:
 - Availability of operating rooms
 - Anaesthesia team, procurement team
 - Hospital routine
 - Flight time, workload, weather

Procedure

11. Procurement

- Organs procured by surgeons from donor hospital
- Correct conditioning of organs
- Accompanied or unaccompanied transport of organs to recipient hospital

Procedure

12. Transport

- Taxi, ambulance, helicopter, jet
- Ischemia time: the time interval between the interruption of the organ's blood supply in the donor's body and the resumption of the organ's blood flow in the recipient's body

Heart

3–4 h

Lungs/liver/pancreas

6–8 h

Kidneys

12–24 h

28.05.2025

Procedure

13. Transplantation

- Preliminary examinations carried out on the recipient
- Transplantation carried out in transplant centre

After a successful operation, the transplanted organ regains its function.

Organ recipients

- Improved quality of life
- Lifetime medication (immunosuppression)
- Prolongation of life
- Possibility to write an anonymous thank you letter to the donor family

Lara, liver transplant recipient

Organ recipients

Renata, heart recipient

Sébastien, heart recipient

Maurice, kidney recipient

Lorena, heart recipient

Elio, heart recipient

Samuel, liver recipient

After organ donation

Tissue donation

- In case of death in hospital
- 24–48 hours after death
- Consent
- Categories on donor card
 - Cornea
 - Cardiac valves, large blood vessels
 - Vessels

Corneal transplantation after eye injury,
corneal infections (keratitis)

Saying goodbye

- Possibility for relatives to say goodbye to the deceased
- Funeral organized according to the wishes of the deceased and his or her relatives
- Last respects, cremation or burial possible

Most important principle: dignified treatment both before and after the organ removal.
